

Microsoft Dynamics AX Industry Business Solutions

Global changes in manufacturing are creating a new industrial revolution

Competition from low-wage companies, the meteoric rise of e-commerce, evolving supply chain practices, and the mandate to produce a rapid return on investment (ROI) at any cost are all exerting severe pressures on industrial manufacturers. Daily, they confront challenges related to product quality, business integration, on-time delivery, evolving supply chain initiatives, and improved customer service. The competition for each customer is intense—a fact not lost upon buyers, who are demanding that manufacturers produce goods faster and cheaper without sacrificing product excellence.

Winfosoft offers a powerful set of applications and services for industrial manufacturers. These integrated solutions can be deployed quickly and inexpensively, without complicated customizations and drawn-out complex projects.
