

Microsoft Dynamics AX Industry Business Solutions

The life sciences industry is one of the most complex industries in the world. Scientific advances are revolutionizing the process of finding and developing new drugs and medical products. The time-to-market and profitability pressures are intense.

Being the first company to market and patent a new product is a key indicator of potential success. Nothing is more critical than access to real-time information on production process operations. Life sciences companies depend on this data to make sound business decisions, maintain compliance, and run efficiently.

Demanding on Every Level

Life sciences organizations of all sizes need information systems that can manage and analyze large amounts of data quickly in a stable, reliable, and, above all, secure way.

Life Sciences Manufacturers & Distributors

Winfosoft is a Microsoft Certified Value Added Reseller providing consulting and application specific solutions for Life Sciences Manufacturers and Distributors such as Pharmaceutical, Medical Devices, and Bio Technology
