

## Winfosoft Cloud Computing

Cloud Computing has captured the imagination of the technology services and business communities alike.

So what exactly is it? Cloud computing is a model for enabling convenient, on-demand network access to a shared pool of configurable computing resources that can be rapidly provisioned and released with minimal management effort or service provider interaction. At its core, the cloud utilizes recent technology trends such as Infrastructure as a Service (IaaS), Software as a Service (SaaS), Virtualization, and more to provide on-demand computer resources to users via the internet.

### Benefits of Cloud Computing

- Scale rapidly—up and down
- Deploy services only when and where they're needed.
- Deliver rich experiences across the PC, phone, and browser
- Generate efficiencies and cost savings by paying as you go for only the services used

## Cloud Computing

Winfosoft is a Microsoft Certified Partner providing Cloud Computing Services

### Winfosoft Cloud Computing Services

- Cloud Services
- Computer Hosting
- Computer System Administration
- Virtualization Services
- Security Management
- Backup and Storage Management
- Disaster Recovery

Winfosoft works directly with a client to build its Private Cloud environment according to their unique security, compliance, and/or usage requirements. Services can be delivered in the Hosted model with logical security, on dedicated nodes within the clustered environment, or in a physically distinct customer dedicated environment.
