## McLane 3g Advanced Warehousing Native to Microsoft Dynamics AX

### McLane history in distribution

McLane was founded on the experience and knowledge gained in over a century in the distribution industry. Our founder, Drayton McLane, grew a small, grocery business into what is now one of the largest distributors in the world – McLane Company. The methodology and approach used to streamline the large-scale supply chain operations of McLane Company were acquired by Walmart in the early 1990's. This intellectual property around distribution also caught the eye of Microsoft – which is why McLane Logistics Technology partnered with Microsoft to develop the best-of-breed warehouse management system – Warehouse 3g – native to Microsoft Dynamics AX.

### McLane Leader in Logistics

McLane Logistics Technology's Warehouse 3g is a cutting edge, new warehouse management system (WMS) built upon the bedrock of over 100 years of warehouse distribution experience. Native to the Microsoft Dynamics® AX ERP application, Warehouse 3g provides a robust feature set and improved functionality that can dramatically improve the efficiency of your warehouse operations. Key Features of Warehouse 3g are:

- **Physical Inventory**
  - Selection of items (ABC, Location Ranges, Vendor, etc.) to count
  - Counting and recording of counts
  - Recounting for variances
  - Posting of counts
  - Adjustment of count
- **Receiving**
  - Appointment scheduling with best door calculation
  - Purchase order management
  - Directed putaway logic
  - Dated item handling (e.g. perishables)
  - RF usage Reporting
- **Shipping**
  - Preparation for picking
  - Picking/Selection of product
  - Order-based replenishment
  - Loading
  - Definition of warehouse shipping areas
  - Customer visibility & maintenance
  - Container visibility & maintenance
  - Order wave review & modification
  - Master Schedule maintenance
  - Load Schedule maintenance
  - Load close/departure
